24-hour clock
The mice have written out all 24 hours on two clocks – one clock for the first half of the day (am), and one for the second half of the day (pm).

Help Cody finish copying the hours from 13 to 24 into the boxes on the clock below. Now draw hands to show a time.

Could we show all 24 hours on one clock?

Dilly
It’s four twenty am, or twenty minutes past four in the morning.

Hmmm I still can’t tell if that’s an ‘am’ time or a ‘pm’ time.

Harley
It’s four twenty pm, or twenty minutes past four in the afternoon.

Remember, digital clocks show the minutes PAST the hour, not the minutes to.

Underneath each analogue clock below, write the ‘am’ time as it would appear on a digital clock.

This clock says it is exactly 2pm, or 2 o’clock in the afternoon.

Digital clocks tell the time using all 24 hours, so you always know if it is an ‘am’ or a ‘pm’ time.

hour minutes past
14:00

Now write the ‘pm’ time for each clock above, as it would appear on a digital clock. You could use the clocks on the opposite page to help you.
